Keyword:

**Pokémon, Robots
, Dooms**

I am going to tell methods how to bring The Pokémon game, at universal level with VR, and How VR Going to/ ready to bring new way of marketing industry.

Moreover, I am going to tell mistakes of Elon musk and why it's important to add consciousness to robots after doom day.

Bringing Pokémon in VR is great, or my dream is to play outside of mobile phone. VR do provide that opportunity.

The Pokémon, Important of Conscious in robots after Dooms Day, and Mistakes of Elon Musk.

Method introduced by Gaurangkumar Patel

I am going to tell methods how to bring The Pokémon game, at universal level with VR, and How VR Going to/ ready to bring new way of marketing industry.

255 Gaurangkumar Girishbhai Patel

Moreover, I am going to tell mistakes of Elon musk and why it's important to add consciousness to robots after doom day.

Bringing Pokémon in VR is great, or my dream is to play outside of mobile phone. VR do provide that opportunity.

Poke Ball

To play Pokémon outdoor, / make Pokémon outdoor, the company must introduce physical – poke- ball made of Ruber or whatever is safe but most important is Barcode on it. Or premium will machinal ball with fingerprint access. Impotently, all supposed to have bard code which VR scan it and allow player to use it.

The premium Ball: - comes with Finger paint scanner and after scanning it will show barcode in screen and it will letter scan by VR.

This way all people have their own individual account of storing Pokémon, and same as login from any device and saving.

Same for the Beyblade, the anime animal will come out, that can be seen by VR glass.

Marketings: -

For the Beyblade its easy as limited characters and can be given in products, gift, or prize. Same for Pokémon as they are unlimited but premium /rare Pokémon can be given in the same.

Now back to Pokémon as its big and same concept can apply anywhere or on other games as its universal lever even, at space station they can see rare Pokémon with VR.

Universal Pokémon: -

To make universal Pokémon: - The developer needs app and dynamic and static app. In the app the location of Pokémon would be static, and map would be dynamic. The Pokémon wasn't available to the public but in sky or other places people could see but could not fight or cath. The type of Pokémon would be random and appearance also random.

The person can call Professor Samuel Oak, and ask about worldwide Pokémon count or country, state and location wise.

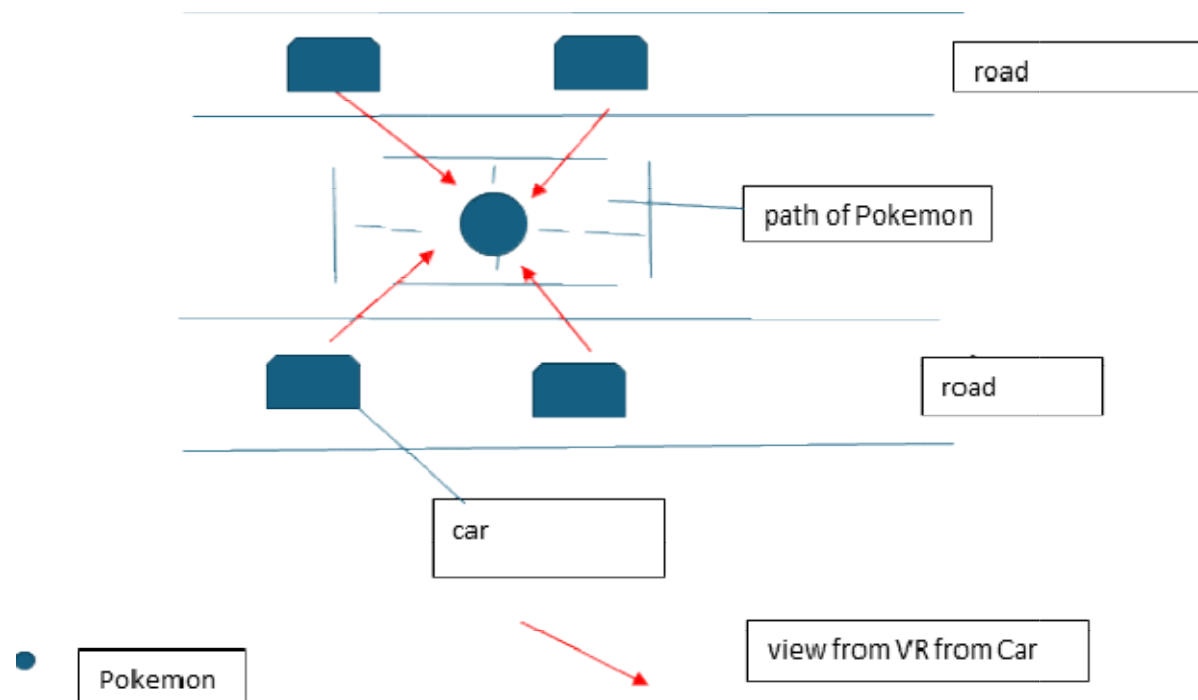

All Pokémon locations account and number are saved in a single database. So, the company can tell and allow to share poke balls etc.

All The person going to look original just they going to see Pokémon with VR glasses.

Premium people can buy their own Location in home or go to public park for Pokémon fight.

When they go to Gym, they will leave them to train or train them self in park.

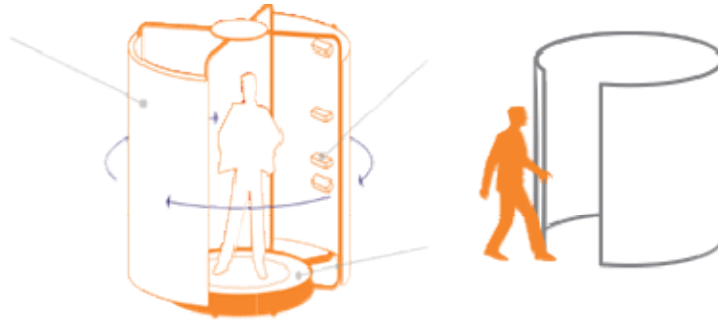

Example bit static and dynamic map:- where Pokémon locations are on cloud and base on Geolocation.

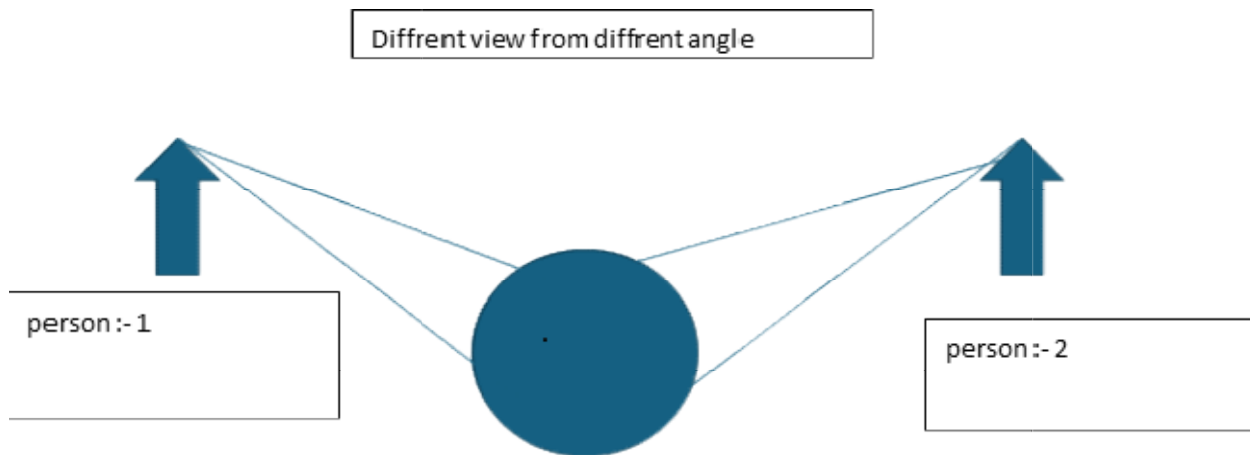

Here the actual Pokémon location is Statics but can move in little space, but its view is different from different angle. It's easy to make as the Pokémon store in data file is in 3D. SO the VR can Find location from GPS from How far Object as Pokémon and show them Accordingly. The same technology is used to see Naruto from a different angle to see the same fight differently.

It's the same as seeing the same 3D house from a bit different angle in the same room. As another person is there the app changed the person's face as he selected as Avtar or real. Or easy example: - it's like recording cricket from all around and clubbing file in one or making 3D models and seeing as needed.

However, In Pokémon its universal game So Pokémon character saved in 3D and bit static location to move and by GPS and angle, point, etc different person can see same items differently. Like Human seeing in 2D and Coverting it 3D, But here 3D modeling necessary.

Its like Scanning or making 3D model: - <https://www.shapify.me/partner/booth>

Here is an example of it.

As its Game 3rd person view or many people view, they can decide or if available at location they can enjoy by Point, distances, angle etc. The whole fight and characters all should be saved as 3D as its computer simulation no camera needed. Another person beside or around are just prediction / hologram created or finished by AI instead of camera if they are seeing from different location and appear at specific location.

All the person Rank can be saved by winnings and it's now Universal with one database. All other easy-pisy.

Important of Conscious in robots after Dooms Day:- its important that Robot can bring back Human on other planet far from human rich or after dooms day, as they just need solar energy or radioactive power to run their self and other equipment, in space they might don't have nitrogen, but they still have - - temp. They can do anything without human and emotion will help them to guide.

Mistakes of Elon Musk: - he did many just read my LinkedIn, but he thinks settling on planet is good, however its not good as they cannot expand that easy or live place if needed. As no environments so no industrialization so its spoiling resources, when in the space settlement movement is easy. --- planets are for mining only unless they have an earth environment. Robots can mine.

Now back to Beyblade: - same as other but with physical toy it can be matched and as one person lose it can be animated by showing it and saving in 3D.

Actual marketing: - VR can change digital bord for advertising with permission of owner of house or property. many thing is possible....

Its like replacing Actual ad or showing Advertisement BY location.

Example:-

Future opportunity with same thing : easy pisy with this above methos :- its like sharing File excel and multiple people using same file. Like giving many or two people same VR glass and some time work accordingly location, and for easy use making website for VR. in game one admin and in other thing like education project, IT, mechanic multiple admin ...

- Benefit of Playing Game like it/ How to make it beneficial to health:-

It's easy, just adding health monitoring software, and making rules that If Trainer/owner of Pokémon do exercise then Pokémon gets stronger, depends on what kind of exercise doing person same kind of benefits goes to Pokémon.

some power Pokémon gets pre determine strengths and power. But to train water type go near water, grass type go near to grass, to improve speed run, mental power meditation, games.

Moreover, other skill is based on person ability to guide by words, and AI of that Pokémon. All Pokémon start with base skill and power and some skill the Pokémon will gets by fighting like chess. it will improve social gathering.

we believe how fighting will different then if someone just fight with other all the time ?- Definity there has loophole but not really. If some gets fighting skill (by AI) but no physical strength, it will not helpful. The Pokémon might knock down in few punch, simple. So might Pokémon got fighting skill but no strength and stamina then same :- etc....

same method can be used for many game ... to improve both

its base on coder skill to how to make it fair.

more pics :-

kids playing without VR.

with VR, kind of stealing AI pics...

short:- I haven't try login 2 with same id- VR /AR and giving to two different people, but we doing it like have two iPhone and one cloud - some change can be make by company and some by users- and all user using one cloud. kind of read above

i don't wan to write about body suit its enough other can do by their self to feel shock or punch or rock hits
